

Services Report — Chikku Robotics

Table of Contents

1. [Robotics & AI Consulting](#)
2. [Engineering & Integration Support](#)
3. [Training & Education Programs](#)
4. [Maintenance & Lifecycle Services](#)
5. [Custom Robot Development](#)

1. Robotics & AI Consulting

Expert consulting services to help organizations identify, plan, and implement robotics and AI automation strategies tailored to their specific needs.

1.1 Automation Readiness Assessment

We evaluate your current operations, identify automation opportunities, and build a prioritized roadmap for robotic deployment. Includes ROI analysis and technology recommendation.

1.2 Solution Architecture & Design

Our engineers design end-to-end robotic solutions — from hardware selection to software integration — ensuring compatibility with your existing systems and workflows.

1.3 Proof of Concept (PoC) Development

Rapid prototyping and pilot deployment to validate automation concepts before full-scale rollout. Typically **4–8 weeks** from concept to working prototype.

1.4 Safety & Compliance Consulting

Guidance on robot safety standards (ISO 13482, ISO 10218, etc.), risk assessment, and certification processes for deploying robots in regulated environments.

2. Engineering & Integration Support

Hands-on engineering services for robot deployment, customization, and integration with existing enterprise systems.

2.1 System Integration

Integration of our robots with your **WMS, ERP, MES, HIS**, and other enterprise systems. Custom API development and middleware for seamless data flow.

2.2 Custom End-Effector Design

Design and fabrication of custom grippers, tools, and fixtures for specific application requirements. Rapid prototyping with in-house 3D printing and CNC machining.

2.3 On-Site Deployment

Our field engineers handle robot installation, commissioning, site mapping, and workflow configuration at your facility. Typical deployment: **1–4 weeks** per site.

2.4 Ongoing Technical Support

24/7 technical support with remote diagnostics, on-site service visits, and spare parts management. SLAs from 4-hour response to next-business-day.

3. Training & Education Programs

Comprehensive training programs to upskill your workforce in robotics operation, programming, and maintenance.

3.1 Robot Operator Training

Hands-on training for frontline staff on robot operation, safety procedures, and basic troubleshooting. **2-day** program, no prior technical experience required.

3.2 Robot Programming Certification

Learn to program our cobots using teach-by-demonstration, Python scripting, and ROS 2. Covers path planning, vision integration, and task sequencing. **5-day** program.

3.3 AI & Computer Vision Workshop

Deep dive into the AI technologies powering our robots. Learn to train custom object detection models and deploy models to edge devices. **3-day** program.

3.4 Fleet Management Administration

Training for system administrators on Chikku Cloud fleet management — robot provisioning, traffic management, analytics, and maintenance scheduling. **2-day** program.

3.5 Train-the-Trainer Program

We certify your in-house trainers to deliver operator and basic maintenance training. Includes all training materials, assessments, and ongoing curriculum updates. **5 days + ongoing support**.

3.6 Training Program Summary

No.	Program	Duration
1	Robot Operator Training	2 days
2	Robot Programming Certification	5 days
3	AI & Computer Vision Workshop	3 days
4	Fleet Management Administration	2 days
5	Train-the-Trainer Program	5 days + ongoing support

4. Maintenance & Lifecycle Services

Ensure your robot fleet operates at peak performance with our comprehensive maintenance and lifecycle management services.

4.1 Preventive Maintenance Plans

Scheduled maintenance visits covering mechanical inspection, sensor calibration, software updates, and battery health checks.

4.2 Predictive Maintenance

AI-powered monitoring that predicts component wear and potential failures before they occur.

Reduces unplanned downtime by up to 80%.

4.3 Spare Parts Management

Guaranteed availability of critical spare parts with 24-hour dispatch. Regional depots in: **Singapore, Tokyo, San Jose, and Munich.**

4.4 Robot-as-a-Service (RaaS)

Subscription-based robot deployment that includes hardware, software, maintenance, and support in a single monthly fee. **No upfront capital expenditure required.**

4.5 Fleet Refresh & Upgrades

Hardware upgrade programs and trade-in options to keep your fleet current with the latest technology.

5. Custom Robot Development

For unique requirements that off-the-shelf robots cannot address, we offer custom robot design and development services.

5.1 Custom Robot Design

Full-cycle custom robot development — from requirements analysis and conceptual design to prototyping, testing, and production.

5.2 Application-Specific Software

Custom AI models, computer vision pipelines, and robot behaviors developed for your specific application. Built on **Chikku Brain** platform.

5.3 Prototyping & Small-Batch Production

Rapid prototyping with our in-house manufacturing capabilities. Small-batch production (**10–100 units**) for pilot programs.
